

# CARPET CLEANER

## DepHyze™ Carpet Cleaner and Deodorizer

DepHyze™ Carpet is a new class of extremely safe, non-toxic, ultra powerful chemical detergent that removes bacteria, viruses, spores, molds, and fungus with unprecedented efficacy. In fact, DepHyze™ is the world's only safe and effective mold/mildew remover and re-growth retardant (treated areas have not had re-growth of mold or mildew in over 3 years and counting).

Heat from steam cleaners can actually set pet stains and odors into carpet permanently, and cleaning chemicals with strong odors (such as common vinegar) can encourage pets to revisit to mark the area in order to mask the scent of the cleaner. Enzymatic cleaners have proven somewhat effective, but are expensive and see mixed results after multiple treatments. DepHyze™ Carpet cleaner has demonstrated the ability to completely neutralize tough pet odors like cat urine after a single application.

### 100% Biological and Chemical Odor Negation

Because DepHyze™ Carpet Cleaner provides 100% biological and chemical odor negation (true chemical neutralization- not a mask), it is extremely effective at neutralizing tough odors in carpet caused by mold, mildew, cigarette (and tobacco) smoke, and pets.

### Fire and Cigarette Smoke

Most air fresheners and carpet cleaners only mask fire, cigarette, and other tobacco smoke odors, providing merely seconds of relief. DepHyze™ Carpet Cleaner, a two-part liquid, can be used along with DepHyze™ aerosol (for airborne odor removal) to neutralize odors immediately and permanently, leaving your car and entire home (carpets, furniture, drapes, etc.) free of both unpleasant odors and harmful pollutants found in second-hand smoke. Even long-standing, embedded odors don't stand a chance!

### Pet Odors

Heat from steam cleaners can actually set pet stains and odors into carpet permanently, and cleaning chemicals with strong odors (such as ammonia or vinegar) can encourage pets to revisit to mark the area in order to mask the scent of the cleaner. Enzymatic cleaners have proven somewhat effective, but are expensive and see mixed results after multiple treatments. DepHyze™ Carpet Cleaner has demonstrated the ability to completely neutralize tough pet odors like cat urine after a single application.

### Carpet Decontamination & Real Estate Rehabilitation

Cross-contamination from one infected area to another is a major concern. DepHyze™ Carpet Cleaner has been formulated to aid in the reduction of cross-contamination on treated surfaces not only in hospitals but also in schools, institutions, and in households. DepHyze™ delivers non-acid disinfection performance in an economical, ready-to-use, two-part liquid solution.

DepHyze™ is so effective at neutralizing dangerous chemicals that it can save contaminated buildings that would have been demolished only a year ago. The recent surge in clandestine methamphetamine ("meth") laboratories, for instance, has created a unique and difficult problem. Carpet contaminants such as those produced during the methamphetamine "cooking" process can be very harmful to individuals who are exposed to them even after a meth lab has been dismantled. There is currently no standardized protocol for cleaning dismantled meth labs. As a result, the response to protect the public from the contaminants in such properties ranges from doing nothing to demolishing the property. Property owners are advised to hire environmental companies specifically trained in hazardous substance clean-up process. However, because DepHyze™ Carpet Cleaner neutralizes such harmful contaminants left in absorbent material like carpet and furniture, property owners now have a much better and less expensive option: DepHyze™ Carpet Cleaner.
